ERES ONLINE KNOWLEDGE-BASE

The 1000-Year [illegible]

EMPIRICAL REALTIME EDUCATION SYSTEM · EST. FEBRUARY 2012 · BELLA VISTA, ARKANSAS

This is the ERES corpus mapped as a place you can walk. The left panel is the **topography** — the subject areas of New Age Cybernetics. Each opens to an in-depth description on the right, seeded throughout with links into the source documents. The organizing principle is **Transparency**: the whole body of work is open, and the map is meant to be traversed, checked, and argued with — not taken on faith.

Areas: 10 **Seeded documents:** 54 **License:** CCAL v2.1 / CC-BY 4.0

Founder: Joseph A. Sprute (ERES Maestro)

The turning index. Every keyword is a slice of one picture; the pointed slice is the source in focus. Same link opens inside any keyword's pop-up.

HOW TO READ THIS MAP

Mission — make an **abundance floor** real for everyone, and hold it steady long enough to matter: a governance-and-economics architecture that treats environmental conditions as the causal layer beneath the economic and psychological ones, raises the floor of that layer first, and keeps raising it. That Mission serves one **Vision** — a **thousand-year future steered by Graceful-Evolution**, a civilization that keeps evolving without collapse because its floor keeps rising rather than its ceiling being defended. Every area below is the Mission at work; the thousand-year Vision is why.

Nothing here is decorative. Every area names a facet of that one mission and vision; read any single term and it resolves back to the same center. Start anywhere — the Complete Description Corpus and the Manifesto are the two widest doors in.

01 Orientation — New Age Cybernetics & the Transparency Principle

START HERE · FIRST PRINCIPLES

New Age Cybernetics (NAC) is the study of how environment, economy, and mind steer one another, and how a civilization can raise its floor deliberately instead of defending its ceiling by accident. The Master Theses Overview is the shortest path across the whole argument; the analysis of key philosophical concepts unpacks the vocabulary those theses lean on.

Transparency is not a policy here — it is the method. Every claim is scored on the BEST / SOUND / GOOD ontology so that a reader can see what standing a statement is asserting before deciding whether to trust it. The Manifesto sets the whole thing out in prose — “we begin with a floor, not a promise” — and the Sovereignty Paradox names the central tension the rest of the corpus works to resolve.

02 PlayNAC — the Governance Engine

HOW DECISIONS ARE MADE & SCORED

PlayNAC is the engine that turns the philosophy into rules you can run. The PlayNAC KERNEL is the reference specification; the game-theoretic core explains why the incentives point where they do. Inputs are gathered through VERTECA and resolved through the EP · GERP · SOMT pipeline.

Because it is an educational as much as a governance instrument, PlayNAC carries its own standards for how players learn and advance: the EAAP standard and the identity-binding SIGNET. Article 251 ties the engine to the wider semiosphere it operates within.

03 Livelihood — UBIMIA, Merit & the Economic FLIP

HOW THE FLOOR IS FUNDED

The economic layer is where the "rising floor" becomes a paycheck. UBIMIA — Universal Basic Income plus Merit, Incentives & Awards — is the core distribution model, argued from first principles in the One-Good-UBIMIA thesis. Its settlement rails are described in GraceChain · Meritcoin (research constructs, not securities).

The transition mechanics live in the Economic FLIP and the HINGE Fund, with soft-landing paths for existing instruments in the 401k soft-landing and the Patriot Dividend. The reward side is worked out in Vacationomics and the Meritcology & Paineology detail.

04 Law, Rights & Governance Venues

WHERE CLAIMS ARE ADJUDICATED

A rising floor needs standing in law. The SCALULAR Engine is the scaling instrument that lets one principle hold from a household up to a treaty; the Hague instrument and the Borders analysis carry it into international venues, while Energy Law grounds it in a concrete regulatory domain.

The founding commitments are set in the Covenant and the DOFA proposal, with a standards path sketched in the ISO/IEC preliminary framework. Here "Terms" means **Transparency**: the 48 Terms and the open CCAL v2.1 license are what make the rest of this corpus checkable. See also the site Terms of Use and Privacy Policy.

05 Identity, Security & Protection

WHO YOU ARE, SAFELY

Protection in NAC starts from identity that is verifiable without surveillance. The IDIPITIS · NBERS security-clearance thesis is the anchor; the BEE-NBERS paper works out the biometric-to-ledger binding, and SECUIR defines the protective envelope around it.

At machine scale the same concern reappears as CyberRAVE AI domains and the Infomediary Proof-of-Work, with integrity guarantees argued in the data-integrity thesis. Personal-state instruments such as S3C Enneagram-RT and SSM keep the protection layer human-legible.

06 Health, Body & Human Performance

THE FLOOR, FELT IN THE BODY

NAC treats wellbeing as a measurable layer, not a slogan. The Mind-Body-SPRT thesis sets the frame linking physiological state to performance and standing. The Emission Resonance Index extends the same read-out to self-optimizing cognitive systems.

On the applied side, the ARI framework and Storm Party turn stress and recovery into scheduled, rewardable events, sharing their economic logic with the Meritcology / Paineology detail in the livelihood area.

07 Environment & GAIA — Planetary Stewardship

THE CAUSAL LAYER, FIRST

Because environment is treated as the layer beneath economy and mind, it gets its own instruments. GAIA · SOMT is the master stewardship model; GAIA ECVS and the EDF SUGAR protocol handle valuation and exchange of ecological state.

The long-horizon case is made in How ERES Helps the Planet for Generations, and the measurement backbone is the Bio-Ecologic Ratings Array — the BERA report and its public-private variant FAVORS-BERA, with continuous accounting in ECR.

08 Data & Architecture — the SCALULAR Spine

WHAT HOLDS IT TOGETHER

Underneath every area is one scaling substrate. The TETRA Scalular architecture is the structural pattern; the CBGMODD stateful taxonomy is how state is named so it can travel between instruments without losing meaning.

The connective engineering is set out in the GSSG synthesis (RG405) and the INTUIT architecture, with the validated-data schema in ESVRD. The Missing Piece names the seam these were built to close.

09 Skills, Trades & EarnedPath — the Learning Ladder

HOW A PERSON ADVANCES

Every other area resolves, for an individual, into a path they can climb. EarnedPath is the ladder — competencies earned, recorded, and rewarded — and the HOW · ILO paper connects it to recognized labor standards.

Access is designed in from the start: Hands-Free Voice Navigation keeps the ladder reachable regardless of ability, the LLPM posterity ledger makes a life's earned record durable, and SROC is the contract form that pays for real, verified contribution.

10 Reference Desk & Full Corpus

EVERYTHING, IN ONE PLACE

The whole library lives at the ERES download hub. The best single overview is the Complete Description Corpus; the founding declaration is the Manifesto in English and Spanish. Reuse terms are the open CCAL v2.1 license and the 48 Terms.

Companion pages on this site: ERES Core Stack, NAC Dual-Axis, ECVS, Open Research, and the FAVORS Cone. Governing documents: Terms of Use and Privacy Policy.
